

EMBARGOED UNTIL 11TH SEPTEMBER 2009

Argosy Broadens Product Portfolio with Miranda NVISION

Compact Routers at IBC 2009

Amsterdam, the Netherlands, September 11, 2009 (IBC2009, Stand 10.D55) — Argosy, a leading international supplier of high-definition broadcast, cables and studio infrastructure products, today announced it has expanded its product portfolio to include Miranda's NVISION Compact routers. These slim-line, light weight, and highly robust routers will be available from Argosy with immediate effect — and will be exhibited on the Argosy stand no. 10.D55 at IBC 2009.

Ideally suited to utility routing applications where space is at a premium, the NVISION Compact routers are available in a comprehensive array of formats, including 3Gb/s, HD, SD, AES, analogue video and analogue audio, as well as machine control.

The NVISION Compact routers are available in sizes from 16x4 up to 32x32, and are housed in 1RU or 2RU frames for maximum space efficiency. Multiple control options include Ethernet or serial control, local button panels, and remote hard or soft panels. Easy to use configuration software is supplied as standard to simplify key tasks like salvos and partitioning, as well as integration with other Miranda NVISION and third party routing systems.

"Miranda's NVISION Compact routers represent a robust, highly affordable and space efficient routing solution for broadcasters as they migrate to HD and 3Gb/s," said Alan Henry, UK Sales Director at Miranda.

"We are delighted to add such a highly-respected brand as Miranda's NVISION routers to our line up of infrastructure products," said Mike Purnell, director, Argosy. "Routers and monitoring products are an integral part of the build out of high-definition infrastructure and with these advanced routing systems we are better placed to provide a more complete solution to broadcasters as they transition to high-definition — particularly those in small studio, post production and mobile applications where rack space is at a premium."

About Miranda

Miranda Technologies Inc. (TSX: MT) develops, manufactures and markets high-performance hardware and software for the television broadcast industry. Its solutions are purchased by content creators, broadcasters, specialty channels and television service providers to enable and enhance the transition to a complex multi-channel digital and HD broadcast environment. This equipment allows customers to generate additional revenue while reducing costs through more efficient distribution and management of content as well as the automation of previously manual processes. Miranda employs approximately 560 people at its Montreal headquarters and in its facilities located in Wallingford (UK), Grass Valley (California, USA), Springfield (New Jersey, USA), Paris (France), Tokyo (Japan), Zaltbommel (Netherlands), Dubai (United Arab Emirates), Beijing (China) and Hong Kong. Miranda is listed on the Toronto Stock Exchange. For more information, please visit www.miranda.com.

About Argosy

Established in 1984 Argosy has a broad range of experience in advising and supplying studio installation products such as cabling, connectivity solutions, equipment racking, cable management & patching and is recognised as a leading international distributor and expert in this field. With customer locations around the world, Argosy is renowned as a "one-stop-shop" for systems integrators and end-users alike, however large or small the project.
