

Product Data Sheet

SCHILL GT310RM

Description

Choose the GT Rubber Range for hand-wound cable reels that are suitable for use in the harshest of environments.

With a robust design and operating temperatures of between -20°C and +100°C, the weather-resistant Schill GT310RM makes the storage, use and transportation of cables effortless and is ideal in settings that have a high risk of exposure to oils, petrols or chemicals.

This model features a frame made of break-proof PVC and an integrated handle and locking brake. It measures 310mm in width, is equipped with one-piece synthetic rubber side flanges and has a drum core of 230mm in diameter.

Alongside a removable front panel with auxiliary winding, the drum incorporates three cable supports, two connector clips and an integral winding knob. It is retained on a cantilever axis by a spring catch and is designed to be stacked up to three high for maximum space saving.

Finished in black, it weighs 1.78kg and has an approximate capacity of 110 m microphone cable or 20 m 12-core multicore cable.
