

Product Data Sheet

SCHILL GT450RM

Description

As with all the hand-wound cable reels in the GT Rubber Range, the Schill GT450RM's durability makes it suitable for use in the harshest of environments.

With a reliable design and operating temperatures of between -20°C and +100°C, this robust model ensures that the storage, use and transportation of cables is effortless and is ideal in settings that have a high risk of exposure to oils, petrols or chemicals.

The Schill GT450RM is made of unbreakable PVC, has an in-built carrying handle and features a lockable door with two hinges. In terms of dimensions, it measures 177mm wide and has a 445mm flange. The diameter of its drum core is 295mm, with three cable supports, two connector clips and an integral winding knob completing its list of attributes. It is retained on a cantilever axis by a spring catch and is designed to be stacked up to three high for maximum space saving.

It weighs 5.58kg and is finished in black.
